

ASCOM UNITE MESSAGING SUITE

SMART INTEGRATION WITH A WIDE ARRAY
OF HEALTHCARE DATA SYSTEMS

Most hospitals make huge investments in information technology, which often improves the effectiveness of their primary processes, but the benefits of these investments may not be utilized fully due to bottlenecks and gaps in information flow. Smart integration provided by the clinical-grade UNITE Messaging Suite enables hospitals to optimize information flow and capitalize on existing investments. This results in more efficient patient flow and increased productivity.

Doctors, nurses, administrators and other personnel receive interactive, time-critical information directly via their personal handset as voice, text, alarms or data. UNITE Messaging Suite is part of the Ascom end-to-end solution designed to provide all the components necessary to optimize workflow, including purpose built portable handsets, pagers, personal alarm devices, gateways and device management.

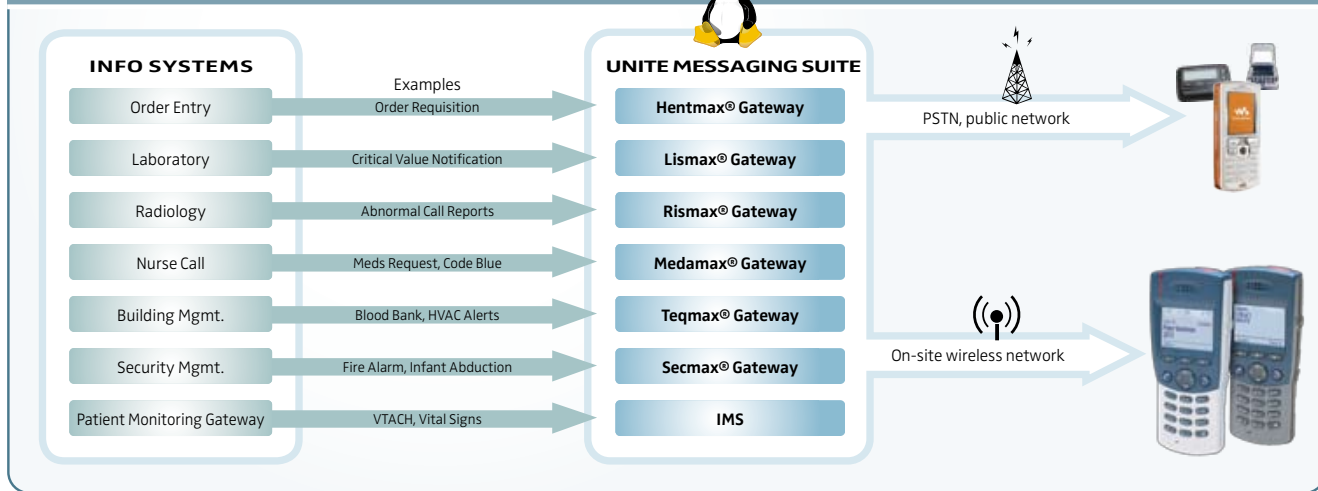

This end-to-end solution differentiates Ascom from other providers by ensuring highly effective integration between multiple components. The Ascom UNITE Messaging Suite is unique because it utilizes an embedded network appliance. It is compact and more reliable because it has no moving parts that can fail and requires no standard operating system that may be susceptible to viruses and needs constant updating.

By deploying the Ascom UNITE Messaging Suite, hospitals can expect improvement in patient care, greater staff efficiency, increased patient satisfaction and improved employee morale.

These benefits will extend to both clinical and non-clinical users throughout the hospital. Along with highly valued qualitative benefits, the Ascom solution will produce measurable quantitative benefits that demonstrate substantial return on investment (ROI).

The Ascom Smart Integration Overview
